

Toward a National Climate Service

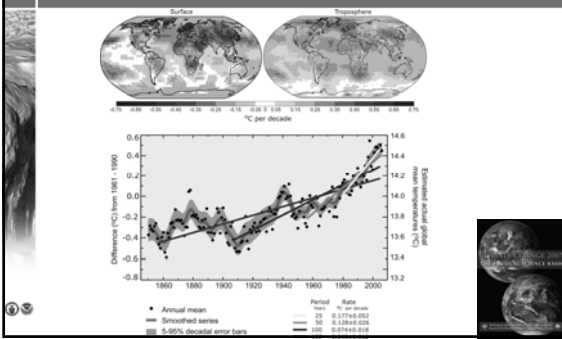

Dr. Chet Koblinsky
Director, NOAA Climate Program Office

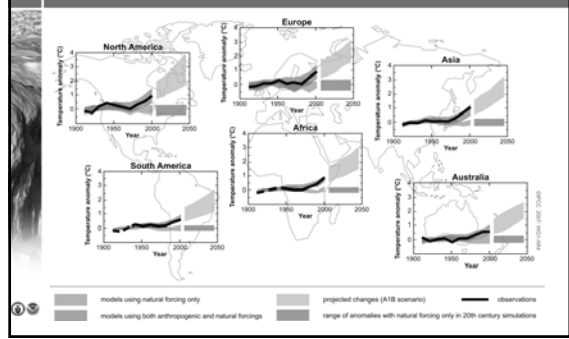

The World Has Warmed

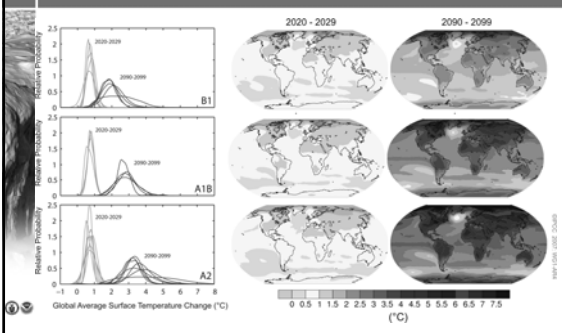

The World Has Warmed

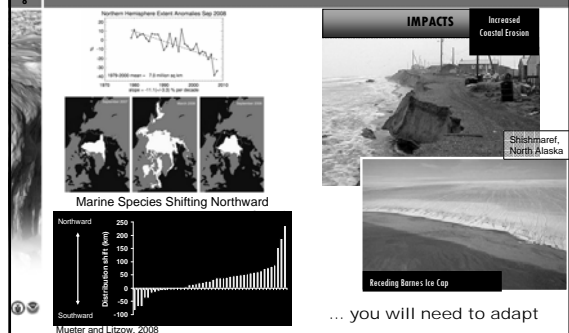

... it will get warmer

... especially in the Arctic

... there will be impacts

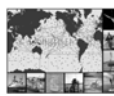

NOAA & Climate: The Present

- NOAA is a leading provider of reliable weather, water and climate information to the nation and the globe
- NOAA's products are the result of a vigorous research program and a growing operational capability
- Products and services are currently provided in a distributed manner

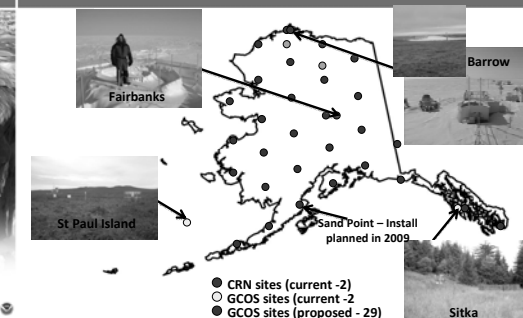

Monitor the state of the climate

- Climate System Observations -
 - Ocean
 - Atmosphere
 - Arctic
 - Carbon
- Data Management and Information
 - NOAA's Comprehensive Large Array-data Stewardship System
 - State of the Climate Report
 - Climatological Statistics and Summaries

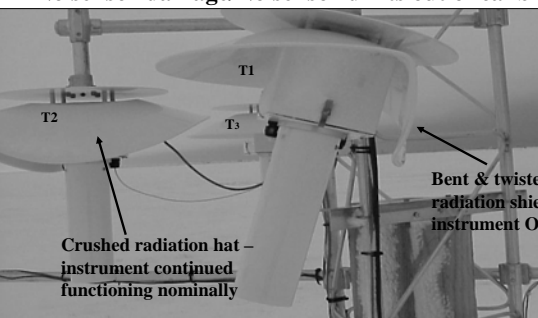

Observing and Monitoring the Arctic

USCRN Web Site: <http://www.ncdc.noaa.gov/crn>

Polar Bear "hugs" at Pt. Barrow, Alaska

No sensor damage/No sensor drifts out of calibration

NOAA Products and Services For Alaska and the Arctic

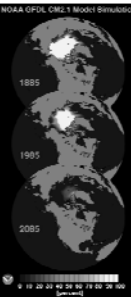

www.arctic.noaa.gov/reportcard

Arctic Report Card

- Issued annually
- Presents clear, reliable and concise information on recent observations of environmental conditions, relative to historical time series records.
- Updates and expands the State of the Arctic Report, published in fall 2006.

Understand the future state of the climate

- Understanding Climate Processes -
- Earth System Modeling, Predictions, and Projections -
- Analysis and Attribution

Arctic Research Program

- Maintaining and extending a network of integrated climate observing systems
- Systems measure temperatures of water, ice, and air, plus thickness of sea ice, species abundance, and biodiversity.

Collaborations with NOAA Labs:

- Provide intellectual and technical expertise
- Develop a modeling framework for the Bering-Chukchi Seas marine observatory.
- Conducting analysis of climate data and model outputs.
- Provide constant improvement in global climate models.

Over ten years, the age and thickness of Arctic sea ice has decreased dramatically. Over the same period the International Arctic Buoy Program increased the number of active buoys from 24 to 54.

0 age of ice in years 10

Assess evolving user needs and context

- Assessing Climate, Impacts and Adaptation – Global, national, regional, sectoral assessments of vulnerability, impacts and adaptation
- Climate Services Development and Delivery – National Integrated Drought Information System (NIDIS) Emerging foci on Coasts, Arctic, Fisheries,... Regional International

NOAA Coastal Services Center
LINKING PEOPLE, INFORMATION, AND TECHNOLOGY

Alaska Center for Climate Assessment and Policy

- Interpreting Climate Projections
- Training for Decision Support Tools

Robert, Parry Kalback, Lewis Nuvak Brower, Matthew Druckenmiller, Archie Yegorov Akhievskaya, Harry Kumpasa Brower, Jr.

- Presenting Monthly Climate Teleconferences & Web Highlights
- Informing Decision Support for At-Risk Communities
- Improving Seasonal Fire Predictions

Climate Service Case Study: Living Marine Resources

NOAA-centric and Problem focused:

- Attribution of Climate Signals impacting ecosystems : Long Term Change & Natural Variability
- Ocean Warming: Impacts on Distribution & Productivity (phenology, production, invasives)
- Impacts of Loss of Sea Ice on Living Marine Resources (at both poles)
- Ocean Acidification Impacts on Marine Biota
- Freshwater Supply & Resource Management
- Sea Level Rise (Natural Resource Implications)

Climate Service Case Study: Coastal Regions

Enterprise solution and problem focused:

- Sea level
- Precipitation patterns and associated effects on freshwater, nutrient, and sediment flow
- Ocean temperature
- Circulation patterns
- Frequency, track and intensity of coastal storms
- Levels of atmospheric CO2 and ocean acidification
- Sea ice formation and extent

Village of Shishmaref, on the Chukchi Sea, Alaska

Toward a National Climate Service

- Public demand for climate information exceeds current capacity
- Sources of information are distributed and usually not coordinated
- Commitment to establish a Climate Service is needed to integrate provision of NOAA's climate products and services
- NOAA needs to engage other agencies and organizations in defining their roles in a National Climate Service partnership
- Improved capabilities are needed to enable:
 - User and issue focused approach
 - Better monitoring
 - Improve national to local predictions and projections
 - Assessments of impacts and vulnerabilities in support of adaptation and mitigation

Meeting the Nation's Challenges Through Partnerships

"The community is highly dependent on its cultural and traditional heritage. Subsisting off the land and sea is a vital component to the daily consumption of natural foods ... and passed on from generation to generation, which is continued today. The preservation of our unique culture is vital to the continued existence of our community as one family."

-Tony Weyiouana Sr. and Luci Eningowuk, Shishmaref, AK

Sea Grant and Sea Grant Extension

- Work with coastal native villages to understand and mitigate shoreline erosion caused by the loss of shore-fast sea ice buffers and winter storms.
- Sponsor research, workshops, and publications on Alaskan coastal planning and adaptation issues.
- Outreach/Education Publication: *Alaska Seas and Coasts* – May 2008 issue "Changing Climate Changing Fisheries?"

Alaska Center for Climate-Change Solutions (Proposed)

- Provide the information, adaptation tools, technical assistance, and funding to develop the capacity to plan for and respond to climate change
- A central goal of the policy is economic, social, and ecological sustainability of Alaska

We are Looking Forward to Other Ongoing Partnerships with Alaska ...

Thank You
